

[ABOUT US](#)

We think kids should build with AI, not just watch videos about it.

AI Kids Lab runs a fully offline, project-based AI cohort for curious 9 to 15 year olds, currently launching in Hyderabad. Small groups. Real mentors. One real AI project your child can stand up and show off at the end.

Why we started this

AI is moving into every part of how work and creativity get done. Most "AI for kids" content we looked at was either a passive video series or a generic coding course with an AI badge stuck on it. We wanted something different: a room where a child spends real hours actually building — with a mentor who has shipped real AI products sitting right next to them when they get stuck.

What we believe

Building beats watching

Small groups, real attention

Mentors who've actually done it

A child who has built one real, working AI project understands more than a child who has completed ten modules about AI theory.	We cap every cohort at 15 kids so every child gets noticed, gets unstuck quickly, and isn't lost in a crowd.	Our mentors aren't reading from a slide deck — they're engineers and IIT, IIIT, and BITS alumni who've built real products at companies like Google, Amazon, Microsoft, and Apple.
Real tools, not toy versions Kids use the same category of tools professionals use — simplified for age 9 to 15, never dumbed down to the point of being fake.	In person, on purpose AI moves fast. The best way to learn to direct it is to sit next to someone experienced while they show you how, not to pause a video and rewind it.	One real outcome Not a certificate. Not a slideshow. A working AI project your child built with their own hands, in stages you can see happening.

Who this is for

AI Kids Lab is built for parents in Hyderabad who want their 9 to 15 year old to move from "curious about AI" to "has actually built something with it" — in a fully offline, small-group setting, over one focused cohort.

Admission

We keep cohorts to 15 seats and admit by a short discovery interview, not a first-come-first-served signup. It's a genuine conversation about your child's interests, not a sales call — and it helps us make sure every cohort is a good match for the kids in it.

Want to know if the next cohort is a fit?

15 seats, admission by interview. A 30-minute conversation is the fastest way to find out.
